(I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the efficacy progression of prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate calcer has metastasized in a patient; (f) assessing the prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient.
The invention relates to a method of determining susceptibility of an individual to joint space narrowing and/or seteophyte development and/or joint pain comprising identifying whether the individual has at least one polymorphism in a polymucleotide encoding at least one of the protein listed in the specification. The methods, composition and agent are useful for modulating the susceptibility of an individual to joint space narrowing and/or osteophyte development and/or joint pain that is associated with a disease, preferably osteoarthritis. The cell line and the non-human animal are useful for screening for an agent for diagnosing an individual having susceptibility to joint space narrowing and/or osteophyte development and/or joint space narrowing and/or osteophyte development and/or joint space narrowing and/or to the polynucleotide encoding a protein listed in the specification. The invention comprises novel human gene trapped sequences (GTSs) which are useful in gene discovery and as markers for gene expression analysis, forensic analysis, and determining the genetic basis of human disease. The human GTSs of the invention are useful for diagnosing and treating disorders affecting development and cell differentiation, such as: aging, cancer, autoimmune disease, hupus, scleroderma, Crohn's disease, multiple sclerosis, inflammatory bowel disease, immune disorders, schizophrenia, psychosis, alopecia, glandular disorders, inflammatory disorders, ataxia telangiectasia, diabetes, skin disorders, osteoarthritis, rheumatoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The sequence data for this patent did not form specification but was obtained in electronic for ftp.wipo.int/pub/published_pct_sequences).
                                                                                                                                                                                                           New human gene trapped sequences, useful for diagnosing and treating disorders affecting development and cell differentiation, e.g. aging, cancer, schizophrenia, alopecia, diabetes, rheumatoid arthritis, or infertility.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ADW06065 standard; DNA;

and immunostitudiates, and a polypeptide (III) having a CDNA sequence (S1) of a ovarian tumour collection the 10912 nucleotide sequences as given in ABL77023 to ABL87934, (III) encoding (II) having a sequence (S2), a T cell population of (II), or antigen presenting cells that express (II). (I) has cytostatic activity. An oligonucleotide (IV) that hybridises to (S1) can be used for detecting ovarian cancer in a patient's biological sample preferably serum or ovarian tissue. The method comprises contacting a biological sample from a patient with (IV), detecting the amount of polynucleotide hybridising to (IV) and comparing the amount to a predetermined cutoff value and thereby detecting ovarian cancer in the patient, where the amount of polynucleotide hybridising to (IV) is detected preferably by collecting comparison of rise detected preferably by collecting and/or expanding T cells specific for an ovarian tumour protein comprising contacting T cells with (III) or (II) is useful in design and preparation of ribozyme molecules for inhibiting expression of the tumour polypeptides and proteins in tumour cells; and to isolate a full length gene from a suitable library e.g., a tumour cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                patient afflicted with ovarian cancer comprising providing to cells of the patient an antisense oligonucleotide complementary to a marker of the invention. The markers are useful for assessing if a patient is afflicted with ovarian cancer, which involves comparing the level of expression of a marker in a patient sample and a normal level of expression of a marker in a control non-ovarian cancer sample. A difference between the expression levels indicates ovarian cancer. The level of expression of a marker corresponds to a secreted protein or to a transcribed polynucleotide or its portion. The level of expression of the marker is assessed by detecting the presence in the sample, a protein or protein fragment is detected using an antibody that specifically binds with the protein or p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to nucleic acid markers which are overexpressed in ovarian cancer cells as compared to their expression in normal (i.e. non-cancerous) ovarian cells. The invention also relates to polypeptides encoded by the markers, antibodies that selectively bind to the polypeptides, a method of inhibiting ovarian cancer in a patient at risk of developing ovarian cancer involving inhibiting expression of a gene corresponding to a marker of the invention and a method of treating a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel isolated nucleic acid molecules (markers) overexpressed in ovarian cancer cells as compared to their normal non-cancerous ovarian cells are used to characterize stage, grade, histological type of ovarian cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       07-JUL-2000;

a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is affilicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cancer has metastazed in a patient; (h) determining whether prostate cancer has metastazed in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         polynucleotide which anneals with the marker or anneals with a portion of the polynucleotide comprising the marker, under stringent conditions. The marker is also used for monitoring the progression of ovarian cancer in a patient which involves detecting expression of the marker in a patient sample at a first point in time, repeating the method at a subsequent time and comparing the level of expression. The method is carried out using an ovarian tissue sample. A composition comprising a marker, polypeptide or antibody of the invention is used to treat ovarian cancer. This sequence represents a human ovarian cancer DNA marker of the
                                                                                                                                                                                                                                                   The invention relates to

02-MAY-2000;
           oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide which comprises a 1-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH13642 represent human cDNA sequences; AAB92446 to AAB95893 represent human and AAH13630 to AAH13629 represent human cDNA sequences; AAB92446 to AAB95893
                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes primer sets for synthesising 5602 full-length CDNAs defined in the speciation. Where a primer set comprises:

(a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Primer sets for synthesizing polynucleotides, particularly the 5602 length cDNAs defined in the specification, and for the detection and diagnosis of the abnormality of the proteins encoded by the full-length control of the proteins encoded by the protein

                                                                                                                                                                                                                                                          The invention relates to an isolated nucleic acid encoding a PRO polypeptide. The polypeptide, agonist or an antagonist, antibody, composition, and method are useful for diagnosing and treating an related disorder, e.g. systemic lupus crythematosus, rheumatoid arthritis. The present sequence represents a DNA encoding a PRO
                                                                                                                                                                                                                                                                                                                                                                                           New nucleic acid encoding PRO polypeptide, useful for diagnosing and treating an immune related disorder, e.g. systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, thyroiditis, or diabetes mellitus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   antintiammatory; Immune disorder; Dermatological; Immunosuppressive; Antirheumatic; Antiarthritic; Osteopathic; Hemostatic; Antianemic; Antitityroid; Antidiabetic; Nephrotropic; CNS-Gen.; Hepatotropic; Virucide; Gastrointestinal-Gen.; Antipsoriatic; Antiasthmatic;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to antisense compounds targetted to a nucleic acid encoding thyroid hormone receptor interactor 6 (TRIP6) to inhibit its expression. TRIP6 is also known as OPA-interacting protein-1 (OIP-1) and zyxin-related protein-1 (ZRP-1). TRIP6 DNA is located on chromosome 7q22. Antisense compounds of the invention are useful for modulating the expression of TRIP6 and for treating diseases or conditions associated with the expression of TRIP6 such as hyperproliferative disorders (e.g. cancer). They are useful for diagnostics, therapeutics, prophylaxis e.g. to prevent or delay infection, inflammation or tumour formation, as research research research sand kits and in distinguishing between functions of various members of a biological pathway. The are also useful in antisense therapy. The present sequence is human TRIP6 gene fragment

                                                                                                                                                                                     The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                               Isolated nucleic acid molecule encoding a reproductive system antigen used in preventing, treating or ameliorating a medical condition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Rosen

                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to novel genes (ABA07454-ABA08224) and proteins CC (ABB10743-ABB10980) useful for preventing, treating or ameliorating CC (medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. CC The nucleic acids, proteins, antibodies and (ant)agonists are useful in CC the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and CC ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, CC breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune CC disorders e.g. Addison's disease, allergies, autoimmune haemolytic CC anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, CC multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) CC cardiovascular disorders such as myocardial ischaemias; (d) wound healing (i) enurological diseases e.g. cerebral anoxia and epilepsy; and (f) CC infectious diseases such as viral, bacterial, fungal and parasitic CC infectious diseases such as viral, bacterial, fungal and parasitic CC infectious diseases such as viral, bacterial, fungal and parasitic CC the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to the isolation of novel human connective tissue related polypeptides (ARU86435-ARU86923) and the polynucleotide (CDNA and genomic) sequences encoding them. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of diseases associated with connective tissue(s), including cancer. The polynucleotide sequences of the invention are also useful in gene therapy. ABK42102-ABK43116 represent genomic sequences encoding the novel human connective tissue related polypeptides. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention describes an isolated nucleic acid molecule (I), which comprises a sequence that is at least 95 % identical to a connective tissue-related polynucleotide encoding connective tissue antigens (CTA). The polypeptide or polynucleotide is useful for preventing, treating, or ameliorating medical conditions in a mammal. The connective tissue polynucleotides and antibodies are particularly useful for treating, preventing and/or prognosing disorders of connective tissues (e.g. rheumatoid arthritis, discoid and systemic lupus erythematosus, cscleroderma, or Sjogren's syndrome), cancers, cancer metastases and/or neoplasias (e.g. leukaemia), neurodegenerative disorders (e.g. atherosclerosis, myocarditis or cardiopulmonary bypass (e.g. atherosclerosis, myocarditis or cardiopulmonary bypass (complications), autoimmune diseases (e.g. systemic lupus erythematosus, rheumatoid arthritis, or multiple sclerosis), allergic reactions (e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               useful for detecting, preventing, diagnosing, prognosticating, treating or ameliorating; haematopoletic or haematological disorders (e.g. anaemia and haemophilia); inflammatory disorders (e.g. inflammatory bowel disease and Crohn's disease); meoplastic disease (e.g. cancer and leukaemia); wound healing and disorders of epithelial cell proliferation; immune disorders (e.g. autoimmune disorders and asthmatic disorders); cardiovascular disorders (e.g. atherosclerosis and myocarditis); infectious disease (e.g. HIVAIDS); endocrine disorders (e.g. diabetes); and gastroenteritis). The present DNA sequence was used in the exemplification of the invention.
The invention comprises the amino acid and coding sequences of human secreted proteins. The DNA and protein sequences of the invention are useful for the diagnosis and treatment of allergic disorders, asthmatic disorders and immediate hypersensitivity diseases (e.g. hay fever, allergic conjunctivitis and allergic rhinitis). The proteins of the invention are also useful for identifying a binding partner. The nucleic acids of the invention are also useful for chromosome identification,
                                                                                                                                                                                                                                                                                                                                  Use of human secreted proteins and nucleic acids for preparing a diagnostic or pharmaceutical composition for diagnosing or treating allergic or asthmatic disorders, e.g. asthma, hay fever, or allergic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SXS
                                                 The invention relates to novel human genes (ABZ66891-ABZ68209) and the CC encoded secreted proteins (ABP9470-ABP9872) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene CC treating or ameliorating medical conditions e.g. by protein or gene CC therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and CC (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the CC (alcancer, e.g. breast and ovarian cancer and other cancers of the CC (alcancer, e.g. breast and ovarian cancer e.g. Addison's disease, lung or urogenital; (b) immune disorders e.g. Addison's disease, CC (allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, CC diabetes mellitus, Crohn's disease, multiple eclerosis, rheumatoid CC arthritis and ulcerative colitis; (c) cardiovascular disorders such as CC myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. Carterial formal and pellepsy; and (f) infectious diseases such as viral,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 18501 BP; 5301 A; 3948 C; 3746 G; 5504 T; 0 U; 2 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New antisense oligonucleotides for modulating P2X4 expression, diagnosing, preventing or treating conditions associated with neurological disorders, osteoporosis or rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention comprises antisense oligonucleotides that are targeted to a nucleic acid encoding P2X4. The antisense oligonucleotides are useful for inhibiting the expression of P2X4 in cells or tissues to treat diseases associated with P2X4 expression, such as: neurological disorders, bone disorders (e.g. osteoporosis), or rheumatoid arthritis. The present nucleic acid represents the human P2X4 genomic DNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI; 2004-081656/08
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              01-JUL-2002; 2002US-00187659

                                                                                This invention relates to a novel method of diagnosing a predisposition to fat deposition, leanness or non-insulin dependent diabetes mellitus (NIDDM) in a subject. The method comprises detecting the presence or absence of a polymorphic variation associated with fat deposition, leanness or NIDDM at a polymorphic site in a purinergic receptor (P2X4) nucleotide sequence in a nucleic acid sample from a subject. The invention may be useful for the development of compounds with an antidiabetic or anorectic activity. The method is useful for diagnosing a predisposition to fat deposition, leanness or NIDDM. The nucleic acid encoding the polypeptide is useful for diagnosing conditions or diseases including fat deposition or NIDDM, also in treating diabetes and obesity. The present sequence is that of the purinergic receptor (P2X4) nucleotide sequence which was used in the method of the invention.
                                                                                                                                                                                                                                                                                                                 Diagnosing predisposition to fat deposition, leanness or non-insulin dependent diabetes mellitus (NIDDM) comprises detecting the presence absence of a polymorphic variation in a purinergic receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        variation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         04-JUN-2003; 2003WO-US017676.

                                                                                                                                                                                                                                     exon
                                                                                                                                                                                                                                                                                                                                                                                   exon
This invention relates to a novel method for testing hypertensive renal
               Claim 1; SEQ ID NO 11; 440pp; Japanese.
                                      Testing hypertensive renal disease factor, by determining polymorphism in genotype of gene relevant to hypertensive renal disease, and estimating risk factor for hypertensive renal disease based on determined genotype,
                                                                       WPI; 2005-326228/34.
                                                                                                              09-OCT-2003; 2003JP-00350959

to a method for treating cancers involving administering to a patient an inhibitor of CAP, and a method of screening for anticancer activity in a potential drug involving providing a cell that express a CA gene, contacting a tissue sample derived from a cancer cell with an anticancer drug candidate and monitoring the effect of the anticancer drug candidate on expression of the CA gene. The CAP proteins are useful for detecting cancer associated with expression of a CAP protein in a test cell sample and for screening for a bioactive agent capable of modulating the activity of a CAP protein. The CA nucleic acids are useful for diagnosing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       adrenoreceptor, aldosterone synthetase, endothelium nitrogen monoxide synthetase, klotho and a sodium-calcium exchanger. Furthermore, it provides primers and probes for determining hypertensive renal disease factors, in particular in relation to renal diseases including hypertensive early renal disease and hypertensive kidney blood flow obstruction. The method enables detection of risk factors, and thus hel in preventing or delaying renal disease. This polynucleotide sequence is the full length human Klotho gene given in an exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   genotype of a gene relevant to hypertensive renal disease and estimating the risk factor for developing the disease accordingly. The present invention describes identifying gene accordingly. The present invention describes identifying the disease accordingly. The present invention describes identifying the disease in at least one of the following genes, namely endothelin converting-enzyme 1, mineralocorticoid receptor, urotensin II, superoxide-dismutase 3, thiazide sensitivity NaCl symporter, guanosine cyclase-A, hepatocyte growth factor, beta-3
                                                                                                                                                                                                  The invention relates to cancer-associated proteins (CAP) and the cancer-associated (CA) nucleic acids encoding them. The invention also relates
                                                                                                                                                                                                                                                                                                          Novel human cancer associated protein encoded within open reading of cancer associated gene, useful as targets for diagnosing cancer
                                                                                                                                                                                                                                                                                                                                                                           WPI; 2004-499109/47
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      18-NOV-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ABD33407;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ABD33407

cc associated (CA) nucleic acid, comprising two or more nucleic acid probes.

Cc The invention also relates to a peptide array comprising two or more

cc isolated polypeptides encoded by a CA nucleic acid sequence, a compound

cc that binds to a polypeptide, which is prepared by immunizing a host animal

cc with a composition comprising the polypeptide or its fragment which

cc with a composition comprising the polypeptide or its antigen binding

cc fragment and collecting cells from the host expressing antibodies against

cc the antigen or its antigen binding fragment, a composition comprising the

cc antibody and a carrier, a method of screening for anticancer activity, a

cc method of detecting a CA nucleic acid, a method of diagnosing cancer, a

cc method of treating cancer and a method of inhibiting expression of a CA

cc nucleic acids. The antibody is useful for detecting the presence or

cc absence of cancer cells in an individual which involves contacting cells

cc protein from the cancer cells and the antibody, where the detection of

cc the complex correlates with the presence of cancer cells in an individual. The composition is useful for inhibiting growth of cancer

cc cells in an individual or for delivering a therapeutic agent to cancer

cc cells in an individual. The invention is also useful for diagnosing

                                                                                                                                                  diagnosis and treatment of cancer, especially carcinomas, as well as the use of compositions in screening methods. The compositions of the invention may have cycostatic activity whilst the disclosed sequences may be useful for gene therapy. The carcinoma associated nucleic acids and proteins are useful for diagnosing and treating carcinomas, for example lymphoma, breast cancer, prostate cancer or leukaemia, or for screening drug candidates or bloactive agents capable of binding to, or modulating the activity of, a carcinoma associated protein. The present sequence is the genomic DNA sequence of the human SYK gene which is a carcinoma associated gene of the invention.

                                                                      ADB72464
                                                                                          RESULT 102
                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to recombinant carcinoma associated (CA) nucleic CC acid sequences from mouse and human (AbA01492-AbA03094), and to CC acid sequences from mouse expression vectors and host cells comprising a CC CA nucleic acid, a polypeptide (especially annibody) that specifically binds to the protein, and a biochip comprising CA nucleic acid or CC fragments thereof: The sequences of the invention were identified using CC oncogenic retroviruses, which insert into the genome of the host organism CC at random. Many of these do not carry transduced host oncogenes or CC pathogenic trans-acting viral genes, meaning that cancer incidence is a direct consequence of the effects of proviral integration into host CC protooncogenes. The CA nucleic acid sequences can be used to diagnose CC carcinoma (especially breast cancer, prostate cancer, lymphoma or CC leukaemia) or a propensity to carcinoma by determination of the sequence of a CA gene, or by determination of CA gene expression in particular CC tissues. CA nucleic acids, proteins and antibodies are also useful as CC present sequence represents a specifically claimed human CA nucleic acids sequence of the invention. Note: The complete sequence data for this complete sequence.
                                                                                                                                                                                                                                                            Query Match

A polynucleotide of the invention has cytostatic activity, and may have a use in gene therapy, or in a vaccine. The recombinant nucleic acids and polypeptides are useful for treating carcinoma, e.g. lymphomas, cancers, neoplasm, adenocarcinoma, and sarcomas. The present sequence represents a human gene of the invention.

Nucleic acid array useful for detecting cancer associated nucleic acid, comprises two or more nucleic acid probes.

WPI; 2005-273395/28

Disclosure; SEQ ID NO 1151; 198pp; English.

CC The invention also relates to a peptide array comprising two or more isolated polypeptides encoded by a CA nucleic acid sequence, a compound CC that binds to a polypeptide, an isolated antibody or its fragment which CC binds to a polypeptide, which is prepared by immunizing a host animal CC with a composition comprising the polypeptide or its antigen binding CC fragment and collecting cells from the host expressing antibodies against the antigen or its antigen binding fragment, a composition comprising the CC antibody and a carrier, a method of screening for anticancer activity, a CC method of detecting a CA nucleic acid, a method of diagnosing cancer, a CC method of tracting cancer and a method of inhibiting expression of a CA concleic acid in a cell. The CA nucleic acids are useful for detecting CA cC nucleic acids. The antibody is useful for detecting the presence or cabsence of cancer cells in an individual which involves contacting cells from the individual with the antibody and detecting a complex of a CA composed from the cancer cells in an individual which involves contacting cells in an individual. The composition is useful for inhibiting growth of cancer cells in an individual. The presence of cancer cells in the cancer cells in an individual or for delivering a therapeutic agent to cancer cells in an individual. The invention is also useful for diagnosing concer, for treating cancer and for inhibiting expression of a CA gene in a cell. This sequence represents human cancer-associated genomic DNA of associated (CA) nucleic acid, comprising two or more nucleic relates to a nucleic acid array for detecting a cancer probes

                                                                                                                                                                                                                                                                                                                                                                                    S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC associated (CA) nucleic acid, comprising two or more nucleic acid probes.

CC The invention also relates to a peptide array comprising two or more consisted polypeptides encoded by a CA nucleic acid sequence, a compound content and the polypeptide, which is prepared by immunizing a host animal content and collecting cells from the host expressing antibodies against the antigen or its antigen binding fragment, a composition comprising the content and collecting cells from the host expressing antibodies against the antipen or its antigen binding fragment, a composition comprising the content and collecting cells from the host expressing antibodies against the content of the composition comprising the content of the composition comprising the content of the carting and a method of diagnosing cancer, a composition of a CA nucleic acid in a cell. The CA nucleic acids are useful for detecting CA concelic acids in a cells in an individual which involves contacting cells content from the cancer cells in an individual which involves contacting cells content from the cancer cells and the antibody, where the detection of the complex correlates with the presence of cancer cells in the composition is useful for inhibiting growth of cancer cells in an individual. The invention is also useful for dagnosing concer, for treating cancer and for inhibiting expression of a CA gene in a cell. This sequence represents human cancer-associated genomic DNA of the invention is also useful for dagnosing.

                                                                                                                                                         Query Match
                                                                                                                                                                                                                                                                                 The invention relates to a method of Identifying p53 pathway modulating agent. The method involves contacting a test agent with an assay system comprising a purified cation C1- cotransporter interactor protein (CIP) polypeptide or polynucleotide, or their functionally active fragment or derivative. The method is useful for identifying modulators of the p53 pathway particularly for identifying agents for treating disorders (e.g. breast cancer) associated with defective p53 function. Modulators of the invention are useful as targets for novel therapeutics. CIP sequences are useful as modifiers of the p53 pathway, and as therapeutic targets for apoptotic or cell proliferation disorders. The invention is useful in comparator accounts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             05-JUN-2001; 2001US-0296076P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to novel DNA and protein sequences which care associated with carcinomas. The sequences are useful for: (1) for screening drug candidates; (11) for screening of bioactive agent capable of modulating the activity of CAP; (11) for screening of a bioactive agent capable of modulating the activity of CAP; (11) for carcinoma; (vi) for inhibiting the activity of CAP; (11) for treating carcinoma; (vii) for neutralizing the effect of CAP; (vii) for treating carcinoma; (viii) for neutralizing the effect of CAP; (vii) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma associated (CA) gene copy number. In addition, the CAP genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent CAP which no sequence data was published
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a novel polymucleotide encoding a guanosine triphosphate-binding protein coupled receptor (GPCR). A polymucleotide of the invention may have a use in gene therapy. The polymucleotide and polypeptide are useful for preparing a composition for treating a patient in need of increased or suppressed activity or expression of the guanosine triphosphate-binding protein coupled receptor. The protein sequences shown in ADC87618-ADC87623 represent polymucleotide sequences
                                                                                                                                                                                                                                    ds; gene; osteopathic; antiinflammatory; antiarthritic; gene therapy; joint space narrowing; osteophyte development; joint pain; osteoarthritis; SNP; single nucleotide polymorphism.

Determining susceptibility of an individual to joint space narrowing, osteophyte development and/or joint pain comprises identifying whether the individual has at least one polymorphism in a polynucleotide encoding Disclosure; SEQ ID NO 436; 297pp; English

individual to joint space narrowing and/or osteophyte development and/or joint pain comprising identifying whether the individual has at least one polymorphism in a polymuclectide encoding at least one of the protein listed in the specification. The methods, composition and agent are useful for modulating the susceptibility of an individual to joint space narrowing and/or osteophyte development and/or joint pain that is associated with a disease, preferably osteoarthritis. The cell line and the non-human animal are useful for screening for an agent for diagnosing an individual having susceptibility to joint space narrowing and/or osteophyte development and/or joint space narrowing and/or osteophyte development and/or joint pain. This sequence corresponds to the polymucleotide encoding a protein listed in the specification. (Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences). invention relates to a method of determining susceptibility of an

Recombinant nucleic acid useful for diagnosis and comprises a nucleotide sequence. treatment о f carcinoma

Claim 1; SEQ

Ħ

NO 622; Opp; English.

The present invention relates to novel DNA and protein sequences which are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bloactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of a bloactive agent capable of modulating the activity of CAP; (Iv) for evaluating the effect of a candidate carcinoma drug; (v) for diagnosing

In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent US2002182586AI, for which no sequence data was published Determining susceptibility of an individual to joint space narrowing, osteophyte development and/or joint pain comprises identifying whether the individual has at least one polymorphism in a polymucleotide encoding ds; gene; osteopathic; antiinflammatory; antiarthritic; joint space narrowing; osteophyte development; joint pai Sequence 168821 BP; Jones KA, 03-JUL-2003 Homo sapiens osteoarthritis; Osteoarthritis-associated polymorphic 06-MAY-2004 ADL13935; ADL13935 standard; DNA; 177866 WPI; 2003-559141/52 20-DEC-2001; 2001US-0342603P 19-DEC-2002; 2002WO-US041225 WO2003054166-A2 protein. 161763 Local 2895 46; Similarity INCYTE GENOMICS GGTGGATCACCTGAGGCCAGGAGTTCGAGACCAGCCTGGCCAACAT 161808 GGTGGATCACCTGAGGCCAGGAGTTCGAGACCAGCCTGGCCAACAT Schafer A; Conservative (first entry) SNP; 39588 A; 43389 C; 45655 G; 40189 T; 0 U; 0 single 100.0%; 1.5%; nucleotide polymorphism. 0 Score 46; Pred. Disclosure; SEQ ID NO 467; 297pp; English.

The invention relates to a method of determining susceptibility of an CC individual to joint space narrowing and/or osteophyte development and/or CC joint pain comprising identifying whether the individual has at least one CC polymorphism in a polymuclectide encoding at least one of the protein CC listed in the specification. The methods, composition and agent are CC useful for modulating the susceptibility of an individual to joint space CC narrowing and/or osteophyte development and/or joint pain that is CC associated with a disease, preferably osteoarthritis. The cell line and CC in individual having susceptibility to joint space narrowing and/or control to control to the polymuclectide encoding a protein listed in the specification. (Note: CC che polymuclectide encoding a protein listed in the specification but was obtained in electronic format directly from WIPO at CC ftp.wipo.int/pub/published_pct_sequences).

                                                                                                                                                                                                                                                                               The present invention describes the human SLC5AB protein (I), which is a cell surface protein. (I) has cyrostatic activity, and can be used in gene therapy. (I) can be used in detecting and treating SLC5AB sassociated cancer, e.g. colon cancer, breast cancer, thyroid cancer or stomach cancer. (I) is also useful in screening assays, predictive medicine and in diagnostic and prognostic assays. The human SLC5AB gene is located on chromosome 12. The present sequence is used in the exemplification of the

New nucleic acid molecules encoding cytochrome P450 proteins, human CYP 27C1 and a hybrid homologs from Xenopus laevis, useful for treating diseases related to vitamin D or vitamin D metabolite deficiency, e.g. parathyroidism and diabetes.

Example 1; Fig 1A; 209pp; English.

The present invention describes an isolated nucleic acid molecule (I) CC encoding human cytochrome P450, CPP 27C1, and a hybrid homologue from CC Xenopus laevis. (I) has thyromimetic, antidiabetic, cytostatic, cc antilpsoriatic, tuberculostatic, osteopathic, dermatological and cantilpsoriatic acid molecules, and can be used in gene therapy and in vaccines. CC antilpsoriation are useful for treating diseases related to vitamin D or vitamin D metabolite deficiency, e.g. hyper- and hypo-parathyroidism, CC osudohypo-parathyroidism, Secondary hyperparathyroidsm, diabetes, cc disease, hypophosphatemic VDRR, vitamin D dependent rickets, anticonvulsant treatment, fibrogenesis imperfecta ossium, osteoititis cfibrosa cystica, osteomalacia, osteoporosis, osteopania, osteosclerosis, renal osteodystrophy, rickets, glucocorticoid antagonism, idiopathic cor cholesterol, steroid and other lipid metabolic disorders. The present cc which is given in an example from the present invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a method of determining susceptibility of an individual to joint space marrowing and/or osteophyte development and/or joint pain comprising identifying whether the individual has at least one polymorphism in a polymucleotide encoding at least one of the protein listed in the specification. The methods, composition and agent are useful for modulating the susceptibility of an individual to joint space narrowing and/or osteophyte development and/or joint pain that is associated with a disease, preferably osteoarthritis. The cell line and the non-human animal are useful for screening for an agent for diagnosing an individual having susceptibility to joint space narrowing and/or osteophyte development and/or joint pain. This sequence corresponds to the polynucleotide encoding a protein listed in the specification. (Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ds; gene; osteopathic; antiinflammatory; antiarthritic; gene therapy; joint space narrowing; osteophyte development; joint pain; osteoarthritis; SNP; single nucleotide polymorphism.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to novel DNA and protein sequences which are associated with carcinomas. The sequences are useful for: (1) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of a bioactive agent capable of modulating the activity of CAP; (iv) for evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vii) for inhibiting the activity of CAP; (vii) for treating carcinoma; (viii) for neutralizing the effect of CAP; (vii) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma associated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent represents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 256157 BP; 70370 A; 54568 C; 55511 G; 73304 T; 0 U; 2404 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Recombinant nucleic acid useful for diagnosis and treatment of carcinoma comprises a nucleotide sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RESULT 122
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    associated (CA) nucleic acids encoding them. The invention also relates to a method for treating cancers involving administering to a patient an inhibitor of CAP, and a method of screening for anticancer activity in a potential drug involving providing a cell that expresses a CA gene, contacting a tissue sample derived from a cancer cell with an anticancer drug candidate and monitoring the effect of the anticancer drug candidate on expression of the CA gene. The CAP proteins are useful for detecting cancer associated with expression of a CAP protein in a test cell sample and for screening for a bioactive agent capable of modulating the activity of a CAP protein. The CAP nucleic acids are useful for diagnosing cancer, involving determining the expression of a CA nucleic acid in a tissue. This sequence represents a human CA gene of the invention. Note:

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 នន្តន្តន្តន្តន្តន្ត
The present invention describes human cancer-associated (CA) nucleotide compenses (I). Also described: (1) an expression vector comprising (I); (C) a host cell comprising (I) or the expression vector; (3) a microarray comprising a CA nucleic acid; (4) an isolated polypeptide encoded comprising a CA nucleic acid; (4) an isolated polypeptide encoded comprision frame of a CA sequence; (5) an isolated antibody, (6) or its antigen binding frame of a CA sequence; (5) an isolated antibody, (6) comprision frame of a CA sequence; (5) an isolated antibody, (6) comprision frame of a CA sequence; (5) an isolated above; (7) a planmaceutical composition comprising the antibody and a pharmaceutical composition comprising cancer cells, comprising che above (monoclonal) antibody or polynucleotide that selectively comprising the above (monoclonal) antibody or polynucleotide that selectively (9) comprisions for diagnosing cancer or for detecting the presence or absence of concer cells in an individual; (11) a method for inhibiting growth of concer cells in an individual; (11) a method for delivering a therapeutic agent to cancer cells in an individual; (11) an electronic library comprising the polynucleotide or polypeptide, or their fragments,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 123

In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent US2002182586A1, for which no sequence data was published
                                                                                                                                                                                                                                                                                                                                                                                                New cancer-associated nucleic acid for diagnosing, preventing cancer (e.g. lymphoma) or for screening agents that may be use treating or preventing cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        human; cancer-associated gene; cancer-associated protein; cytostatic; gene therapy; vaccine; tyrosine kinase antagonist; G-protein coupled receptor antagonist; cancer; lymphoma; gene; ds.
                                                                                                                                                                                                                                                                                                                                                              Claim 16;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WO2004058288-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human cancer-associated (CA)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ADQ59440;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ADQ59440 standard; DNA; 347814
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 276276 BP; 68379 A; 69211 C; 66764 G;

(1) has cytostatic activity, and can be used in gene therapy, in vaccines, as a tyrosine kinase antagonist, and as a G-protein coupled receptor antagonist. The compositions and methods of the present invention can be used for diagnosing, preventing and treating cancer, especially lymphomas. They may also be used in screening for agents that may be used for treating or preventing cancer. The present sequence represents a human CA gene sequence, which is given in the exemplification of the present invention. Note: The sequence data for this patent did not form part of the printed specification, but was for the present in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match
